

UNC VIR Resident Evaluation App – User Guide

Real-Time EPA Feedback & Reporting

Entrustable Professional Activities (EPAs)

What is EPAs?

- Observable, measurable clinical tasks that trainees can be trusted to perform independently.
- Links competencies (knowledge, skills, attitudes) to real-world activities.

Why EPAs is Important

- Moves beyond vague evaluations to structured, competency-based feedback.
- Supports progressive autonomy and patient safety.

Why Change from Traditional Feedback

- Traditional: Often generic (“good job”), lacks actionable detail.
- EPAs-based: Specific, task-focused, aligned with ACGME milestones and CBME.

Impact

- Improves transparency, accountability, and resident growth.
- Facilitates program directors’ decision-making on supervision levels.

Traditional Evaluation Challenges

Feedback often requested **weeks after rotation ends**.

Attendings must **recall past performance**, leading to vague comments.

Impact of feedback **diminishes over time**—less actionable for residents.

Administrative burden: chasing evaluations, compiling reports manually.

Why Power Apps is Different

Real-Time Feedback: Submit immediately after a case—fresh, specific, actionable.

User-Friendly: Mobile, and desktop access; intuitive interface.

Structured EPA Framework: Aligns with CBME and ACGME milestones.

Cost-Effective: Uses existing Microsoft 365 tools—no extra licensing.

Streamlined Reporting: Instant analytics for PD/Admin; no manual compilation.

Secure & Role-Based: Attending vs PD/Admin access controlled via SharePoint.

Impact

Improves **feedback quality** and **resident learning**.

Reduces **administrative workload**.

Sets a **replicable model** for other institutions.

Entrustable Professional Activities

Level 1

Level 2

Level 3

Level 4

Level 1 – Limited Participation

Summary: Understands basic indications and steps; assists with setup; requires continuous direct instruction across all phases.

Framework Highlights

- Basic familiarity with tools and imaging anatomy; needs show-and-tell coaching.
- Handles instruments inefficiently; requires step-by-step guidance.
- Inconsistent discussion of consent/risks/alternatives without prompting.

Nonoperative / Pre-operative

- Identifies basic indications; requires full guidance for contraindications and planning.
- Assists with sterile setup and positioning under direction.
- Needs prompting to complete consent and review of labs/medications.

Intra-operative

- Observes or performs minor steps under direct

Entrustable Professional Activities

Level 1

Level 2

Level 3

Level 4

Level 2 – Direct Supervision

Summary: Performs most steps with active attending help; identifies a safe approach with guidance; understands indications/contraindications and basic complications.

Framework Highlights

- Selects equipment and access approach with guidance; recognizes anatomy but needs correction.
- Progresses through routine steps; requires real-time coaching for safety/efficiency.
- Completes consent and documentation with prompts; familiar with common sedation/meds.

Nonoperative / Pre-operative

- Reviews imaging and proposes a plan; confirms indications/contraindications with faculty.
- Prepares sterile field and positions patient with minimal direction.
- Delivers consent discussion for straightforward cases; needs support for complex risks/alternatives.

Intra-operative

- Performs key steps with active supervision; maintains

Entrustable Professional Activities

Level 1

Level 2

Level 3

Level 4

Level 3 – Indirect Supervision

Summary: Independently manages straightforward cases; anticipates common issues; seeks help for complex anatomy or evolving complications.

Framework Highlights

- Plans and executes routine cases independently; requests targeted assistance for complexity.
- Recognizes and begins managing complications; understands when to escalate.
- Provides clear, patient-centered communication; teaches basic steps to juniors.

Nonoperative / Pre-operative

- Independently reviews imaging/labs and selects a safe, efficient approach for straightforward cases.
- Coordinates pre-procedure tasks (labs, meds, equipment) with minimal oversight.
- Conducts consent discussion tailored to patient literacy; involves faculty for nuanced risks.

Intra-operative

- Performs routine procedures independently with

Entrustable Professional Activities

Level 1

Level 2

Level 3

Level 4

Level 4 – Practice Ready

Summary: Independently performs complex cases; manages complications; leads the team; teaches juniors; coordinates multidisciplinary care.

Framework Highlights

- Efficient, safe execution across a spectrum of case complexity.
- Anticipates pitfalls; adapts technique; manages complications independently.
- Role-models communication, professionalism, and systems-based practice.

Nonoperative / Pre-operative

- Designs comprehensive plans for complex anatomy or comorbidity; optimizes anticoagulation and labs.
- Leads patient-centered consent with shared decision-making; aligns plan with goals of care.
- Coordinates with referring services and ancillary teams; ensures resource readiness.

Intra-operative

- Executes advanced techniques with precision
